# Rush Hour

The goal of Rush Hour is to unstick a car from a traffic game. The puzzle involves a 6x6 grid of squares. Vehicles are scattered over the grid at integer locations. The goal is to move your car out of the 6x6 grid and escape the traffic jam.

**Author:**

Saharath Kleips

**Version:**

2.00

Vehicles are always 1 square wide, but cars are always 2 squares long and trucks are 3 squares long. Vehicles are orientated either horizontally or vertically relative to the grid. Vehicles cannot move through each other, cannot turn, and cannot move off the edge of the grid. They may move forwards and backwards with respect to their orientation only if they are not blocked by another vehicle. Only one vehicle may move at a time and may only move one square at a time. Move vehicles until your car arrives at the rightmost edge of the grid, where it has escaped the traffic jam.

This program will solve any solvable Rush Hour puzzle and output the minimum possible number of (1 square at a time) moves.

# Class Index

## Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">Board</a>	.....Error: Reference source not found
<a href="#">Vehicle</a>	.....Error: Reference source not found

## Board Struct Reference

### Public Member Functions

[Board](#) ()

*Default constructor for class [Board](#).*

bool [isSolved](#) ()

*Determines whether the state of the grid is solved by checking the last column for any 0s.*

bool [moveForward](#) (char)

*Moves a vehicle forward on the [Board](#) corresponding to its ID.*

bool [moveBackward](#) (char)

*Moves a vehicle backwards on the [Board](#) corresponding to its ID.*

bool [canForward](#) (char)

*Checks if a vehicle can move backwards on the [Board](#) corresponding to its ID.*

bool [canBackward](#) (char)

*Checks if a vehicle can move backwards on the [Board](#) corresponding to its ID.*

void [printStats](#) ()

*Prints a formatted representation of the state of the [Board](#).*

### Public Attributes

int [minSolution](#)

*The lowest possible number of moves to solve the puzzle.*

int [totalVehicles](#)

*The total amount of vehicles in this instance of the puzzle.*

[Vehicle state](#) [6][6]

*The current state of the board and all of its vehicles.*

---

## Detailed Description

Definition at line 50 of file RushHour.cpp.

---

## Constructor & Destructor Documentation

[Board::Board](#) ()

Default constructor for class [Board](#).

Definition at line 195 of file RushHour.cpp.

---

## Member Function Documentation

bool [Board::canBackward](#) (char *cID*)

Checks if a vehicle can move backwards on the [Board](#) corresponding to its ID.

**Parameters:**

<i>cID</i>	is the ID of the vehicle on the <a href="#">Board</a> .
------------	---

True if the vehicle can move. False if the vehicle can not move.

Definition at line 458 of file RushHour.cpp.

bool [Board::canForward](#) (char *cID*)

Checks if a vehicle can move backwards on the [Board](#) corresponding to its ID.

**Parameters:**

**Returns:**

<i>cID</i>	is the ID of the vehicle on the <a href="#">Board</a> .
------------	---

True if the vehicle can move. False if the vehicle can not move.

Definition at line 411 of file RushHour.cpp.

bool [Board::isSolved](#) ()

Determines whether the state of the grid is solved by checking the last column for any 0s.

**Returns:**

True if the grid is solved, False if it is not.

Definition at line 506 of file RushHour.cpp.

bool [Board::moveBackward](#) (char *cID*)

Moves a vehicle backwards on the [Board](#) corresponding to its ID.

**Postcondition:**

The [Board](#) will be updated with the new positions of the vehicles.

**Parameters:**

**Returns:**

<i>cID</i>	is the ID of the vehicle on the <a href="#">Board</a> .
------------	---

True if the vehicle was moved. False if the vehicle was not moved.

Definition at line 346 of file RushHour.cpp.

**bool [Board::moveForward](#) (char *cID*)**

Moves a vehicle forward on the [Board](#) corresponding to its ID.

**Postcondition:**

The [Board](#) will be updated with the new positions of the vehicles.

**Parameters:**

**Returns:**

<i>cID</i>	is the ID of the vehicle on the <a href="#">Board</a> .
------------	---

True if the vehicle was moved. False if the vehicle was not moved.

Definition at line 284 of file RushHour.cpp.

**void [Board::printState](#) ()**

Prints a formatted representation of the state of the [Board](#).

**Parameters:**

**Returns:**

<i>state</i>	is the current state of the puzzle to print out.
--------------	--

---

## Member Data Documentation

**int [Board::minSolution](#)**

The lowest possible number of moves to solve the puzzle.

Definition at line 53 of file RushHour.cpp.

**[Vehicle Board::state](#)[6][6]**

The current state of the board and all of its vehicles.

Definition at line 57 of file RushHour.cpp.

**int [Board::totalVehicles](#)**

The total amount of vehicles in this instance of the puzzle.

Definition at line 55 of file RushHour.cpp.

---

**The documentation for this struct was generated from the following file:**

1 [RushHour.cpp](#)

## Vehicle Struct Reference

### Public Attributes

char [id](#)

*The character representation of this [Vehicle](#).*

char [orientation](#)

*The orientation, either horizontal or vertical, of this [Vehicle](#).*

int [length](#)

*The length of this [Vehicle](#).*

---

## Detailed Description

Definition at line 40 of file RushHour.cpp.

---

## Member Data Documentation

char [Vehicle::id](#)

The character representation of this [Vehicle](#).

Definition at line 43 of file RushHour.cpp.

int [Vehicle::length](#)

The length of this [Vehicle](#).

Definition at line 47 of file RushHour.cpp.

char [Vehicle::orientation](#)

The orientation, either horizontal or vertical, of this [Vehicle](#).

Definition at line 45 of file RushHour.cpp.

---

The documentation for this struct was generated from the following file:

#include <iostream>
```

## Classes

struct [Vehicle](#)  
struct [Board](#)

## Functions

[Board](#) [loadPuzzle](#) ()

*Loads [Board](#) with a Rush Hour puzzle scenario from the console.*

int [solve](#) ([Board](#) &board)

*Solves the current state of the [Board](#) by implementing a breath-first search with previous state comparisons.*

string [boardToString](#) ([Board](#) b)

*Converts a [Board](#) to a String of IDs followed by orientations without character breaks for new rows or columns.*

int [main](#) ()

*Main function that controls user input, console output, and program loops.*

[Board](#) [stringToBoard](#) (string s)

*Converts a String to a [Board](#) with full IDs and Orientations, but does not contain lengths.*

## Variables

const bool [\\_DEBUG](#) = false

*Debug console output and function tracing.*

const bool [\\_FULL\\_OUTPUT](#) = false

*Extended console output for puzzle diagram, moves used, etc.*

[Board](#) [stringToBoard](#) (string)

---

## Detailed Description

Definition in file [RushHour.cpp](#).

---

## Function Documentation

string [boardToString](#) ([Board](#) *b*)

Converts a [Board](#) to a String of IDs followed by orientations without character breaks for new rows or columns.

### Parameters:

Definition at line 563 of file RushHour.cpp.

<i>b</i>	is the <a href="#">Board</a> to convert to a String.
----------	--

The converted [Board](#).

Definition at line 522 of file RushHour.cpp.

[Board](#) [loadPuzzle](#) ()

Loads [Board](#) with a Rush Hour puzzle scenario from the console.

The first integer indicates the number of vehicles (n) in the scenario between  $0 \leq n \leq 10$ . The next n lines represent 1 [Vehicle](#) where each line consists of a space separated list. Each list contains a number (2 or 3) indicating length, a letter (H or V) indicating orientation, and a row number (0-5) of the up most square if orientated vertically or the column number (0-5) of the left most square if orientated horizontally. The first [Vehicle](#) is treated as the escape [Vehicle](#) and must be orientated horizontally.

### Precondition:

User input of a rush hour problem must be valid.

### Postcondition:

[Board](#) is solvable and meets the criteria of the above description.

### Returns:

[Board](#) is the Rush Hour scenario specified by the user.

The number of vehicles in the puzzle.

The length of the [Vehicle](#).

The orientation of the [Vehicle](#).

The starting row of the [Vehicle](#).

The starting column of the [Vehicle](#).

Temporary variable used to grab user input.

Definition at line 112 of file RushHour.cpp.

int [solve](#) ([Board](#) & *board*)

Solves the current state of the [Board](#) by implementing a breath-first search with previous state comparisons.

### Postcondition:

minSolutions will be updated with the minimum amount of moves it takes to solve the puzzle.

Definition at line 214 of file RushHour.cpp.

### **[Board](#) [stringToBoard](#) (string s)**

Converts a String to a [Board](#) with full IDs and Orientations, but does not contain lengths.

#### **Parameters:**

#### **Returns:**

s	is the String to convert to a <a href="#">Board</a> .
---	---

The converted String.

Definition at line 543 of file RushHour.cpp.

---

## **Variable Documentation**

**const bool [\\_DEBUG](#) = false**

Debug console output and function tracing.

Definition at line 33 of file RushHour.cpp.

**const bool [\\_FULL\\_OUTPUT](#) = false**

Extended console output for puzzle diagram, moves used, etc.

Definition at line 35 of file RushHour.cpp.
